

SLEWING RINGS

- ✓ Suitable for high loads
- ✓ Quality monitoring in Asia and Europe
- ✓ Standard series
- ✓ Production according to drawing

TECHNICAL SPECIFICATIONS:

Material: Carbon steel (C45), Alloy steel (CR42Mo4)

Certifications: Manufactured by UNI EN ISO 9001:2000 certified factories

USE

Slewing rings are used when one component must rotate in the opposite direction to the other in one unit or system while providing radial connection between the two parts.

The slewing ring usually supports a heavy but slowly turning load, often on a horizontal surface.

COMMON APPLICATIONS

- Welding machines
- Forest machines
- Agricultural machines
- The handling industry
- Crane trucks
- Swivel loading tables
- Woodworking
- Concrete industry
- Cranes
- Wind turbines
- Excavators
- Machine tools
